UXSUB—Roughing on lavatory center of cocks to backinches.
UXSYC—Roughing on lavatory center of waste hole to backinches.
UXTAW—Roughing on lavatory top slab to bottom of outletinches.

The Western Union Telegraph Co.

Tariff of Square and State Rates

To be used in connection with The Western Union Tariff Book

These pages show the Square and State rates for day and night messages of ten words or less, exclusive of date, address and signature, and also the rates for additional words. Thus: Where ten word day rate is 25 cents, the rate for each additional word is 2 cents; where ten word day rate is 40 cents, each additional word is 3 cents, etc.

NIGHT LETTERS: The rate for *Night Letters* of fifty words or less will be the same as the rate for a day message of ten words or less. For each additional ten or fraction of ten words over fifty the rate will be one-fifth of the ten word day rate.

DAY LETTERS: The rate for *Day Letters* of fifty words or less will be one and one-half times the standard night letter rate, and one-fifth of the initial rate for such fifty words shall be charged for each additional ten words or less.

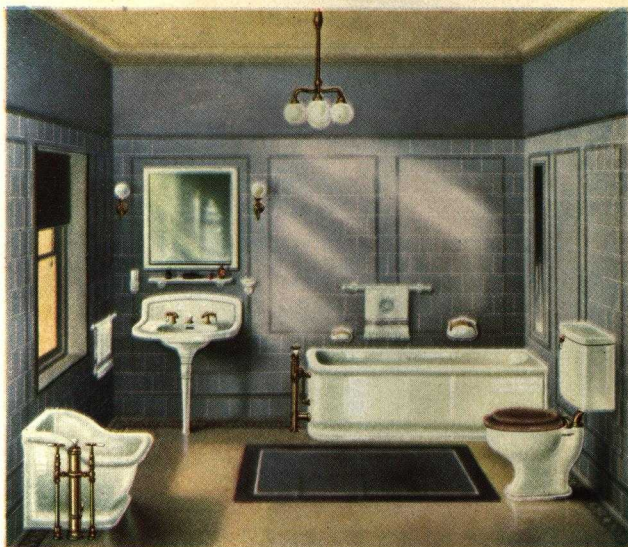

Exceptions to State Rates

	RATE	
	Day	Night
Boston, Mass.	35-2	25-1

“Ideal” Solid Porcelain Bath, Foot and Sitz Tubs Shower Receptors

Every effort has been made to make these Baths as mechanically fine as can be produced. The designs are pleasing and practical. The brass fittings shown in connection with the ware are selected both for their high quality and adaptation to existing sanitary codes. An expert plumber carefully cuts and fits the necessary brass fittings to the piece selected.

While perfection is our aim, human effort has as yet failed to arrive at that state. A classification of our “Ideal” Porcelain ware into “A” and “B” grades is necessary owing to the variance with which the firing treats the different pieces, although made from the same clay and moulds. Such blemishes do not affect sanitary qualities. We select and classify our ware with utmost care and our decision on the classification must stand.

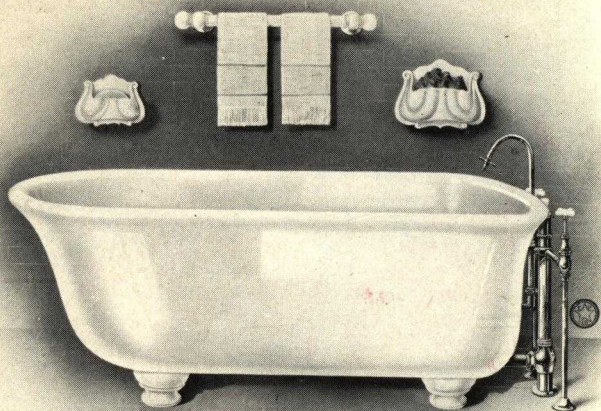

PLATE 2004-N

**"Ideal" Porcelain Special Light Pattern
Bathtub on Feet**

List, complete with fittings, "A" quality	\$109.15	\$113.75	\$122.90

How to Specify Corner Bathtubs of Our Manufacture

FIRST—Have your customer advise definitely in which corner of his bathroom the tub is to be placed.

SECOND—Our method of determining the proper tub is by the end of the tub placed in the corner and not by the location of the fittings. The latter method is used by some manufacturers, causing frequent confusion and mistakes.

The above chart will clearly explain our method. By consulting it before placing your order, possible mistakes may be avoided.

To secure the correct impression for the two lower tubs in illustration, invert the page.

"Ideal" Porcelain Bath Feet

(Glazed pure white)

EXPLANATION—"Ideal" solid porcelain bath feet are used with solid porcelain bathtubs wherever tubs are not tiled into the floor. They are of the same grade of ware as "Ideal" porcelain bathtubs, and provide a most sanitary and slightly support, being glazed white all over to assure freedom from absorption. When used in conjunction with iron bathtubs they will aid toward more complete sanitation, as there will be no discoloration from water splashed upon the floor. They are made in heights suitable to guarantee the proper pitch for draining iron bathtubs.

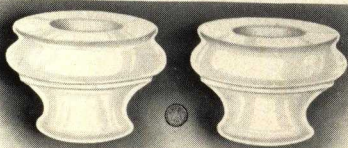

PLATE 2038-N—Round Pattern for Porcelain Bathtubs

Bathtub Fittings

It is possible, and you will find your customers often desirous, of substituting the fittings shown on one Bathtub for those on another.

This may be done, either by stating the plate number desired together with number of Bathtub, the brass trimmings of which you prefer, or by following the directions given on the following pages pertaining to Bath fittings.

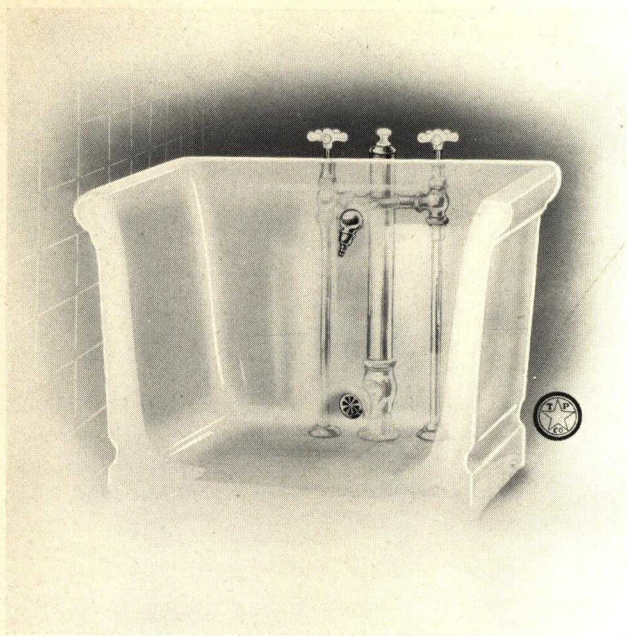

Bear in mind that our fittings are interchangeable. Some few cases there are of course where it is not practical to use other than the fittings shown. Your common sense will tell you which these are.

If using fitting pages for alternatives, be sure to use our fitting numbers. It will save confusion and the danger of error.

If fittings as shown in illustration are desired, specify plate complete with fittings. Always state on order what tub the fittings are to be used with so that tub may be correctly cut.

Unless otherwise specified on order, $\frac{1}{2}$ -inch Supply Pipes, Iron Pipe size, will be furnished.

We handle only the best grade of brass work, merely as an accommodation to the trade. Remember, that a part of our work in furnishing such fittings is to cut and fit them to the ware. We employ expert fitters for this very purpose.

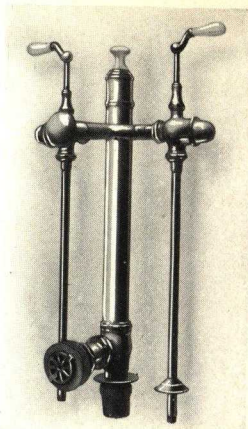

Shadow Illustration

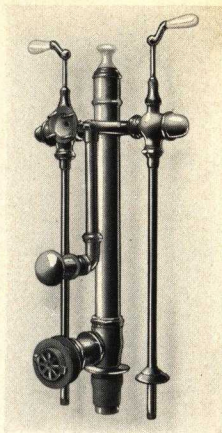

The purpose of this illustration is to show on a base bath the relative position of Supply and Outlet of a Top Bell or Nozzle Supply Fitting.

Such a fitting as the above Top Nozzle Supply has several advantages. Having a Shampoo Attachment for Rubber Hose it may be used in such bathrooms inconvenient for equipping with a regular shower. The nozzle may be unscrewed and removed when not in use.

Such a fitting is also convenient when necessary to draw water from the Bath into a receptacle. See fitting pages for prices.

Shower Bath Receptors

Explanation

"Ideal" Solid Porcelain Shower Receptors will be cut for any style of shower fittings required. In many hotels shower baths are in greater demand than standard patterns of bathtubs. For a man's use, the shower bath is recognized as almost an essential. Because of the great variety of conditions under which it is possible to install shower baths we do not show many shower fittings with "Ideal" Porcelain Receptors, leaving it to the architect's judgment to select such methods of water supply as may be most available. We will, however, be glad to make suggestions as to shower fittings and also supply the brass work. In any event we will ship "Ideal" Porcelain Shower Receptors cut so as to be used in conjunction with any style of shower fittings and make no charge, unless the conditions are exceptional, for the cutting, provided exact instructions are given as to sizes of holes for rods, centers, etc.

“Impervio” Vitreous China Lavatories

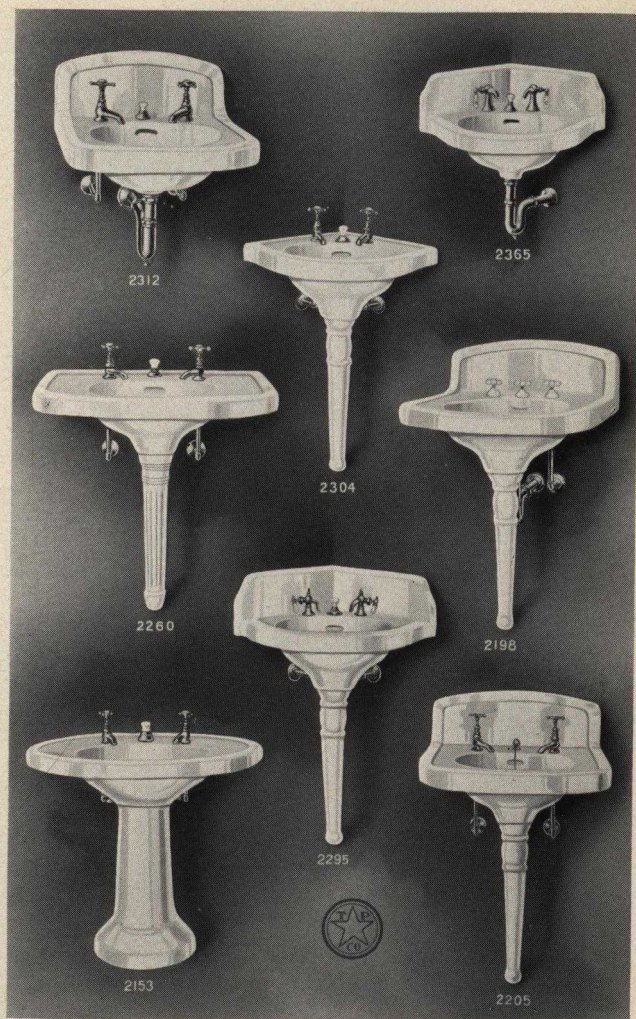

“Impervio” Vitreous China Lavatories are divided into four principal groups as shown on the following pages. It enables a builder to carry out under varying conditions his favorite design of lavatory, whether on pedestal, legs or brackets. A few lavatories designed for specific purposes cannot be so grouped but are as equally important.

The beauty of our glaze, the fine quality of material we use and our careful workmanship have caused our fixtures to be acknowledged the best on the market. The utmost care has been exercised to make our selection of brass operating fittings in keeping with the quality of the ware itself.

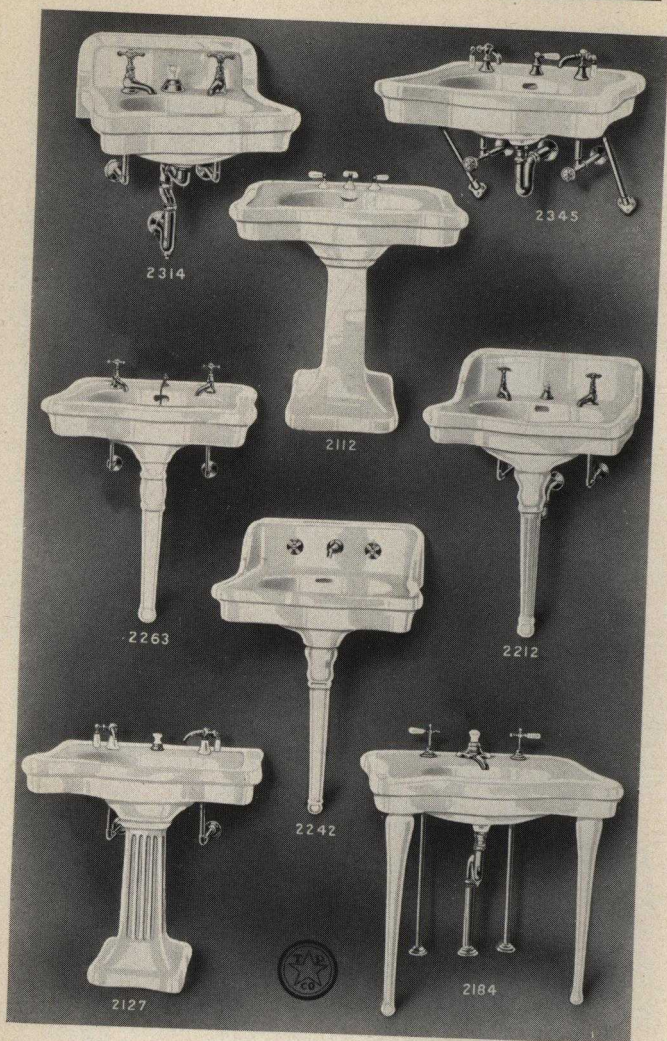

"Tuxedo" Line of China Lavatories

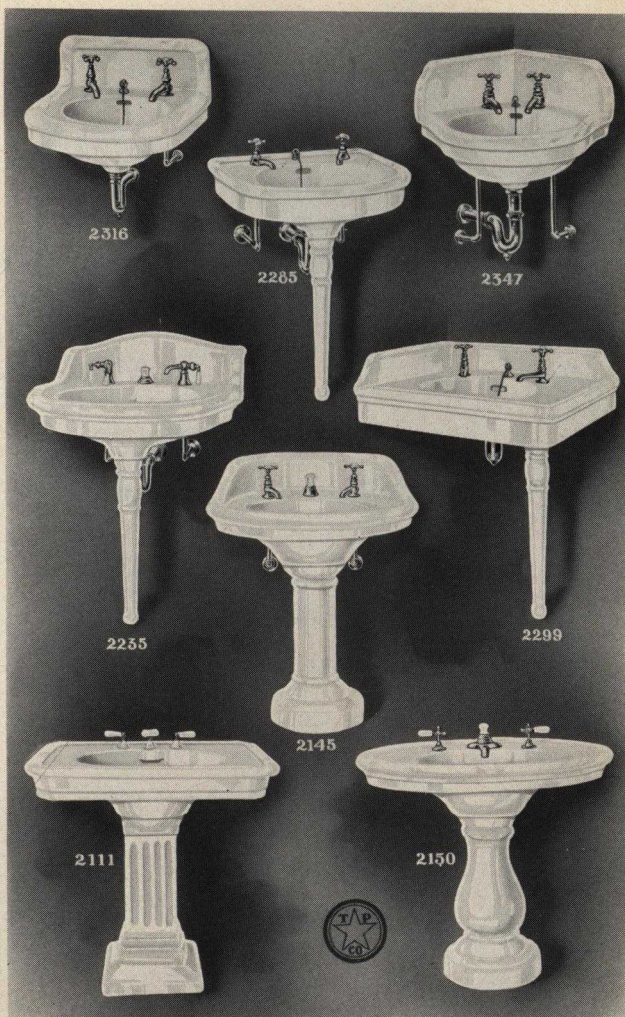

Details may be secured by consulting plate number as indicated

"Bellemeade" Line of China Lavatories
 Details may be secured by consulting plate number as indicated

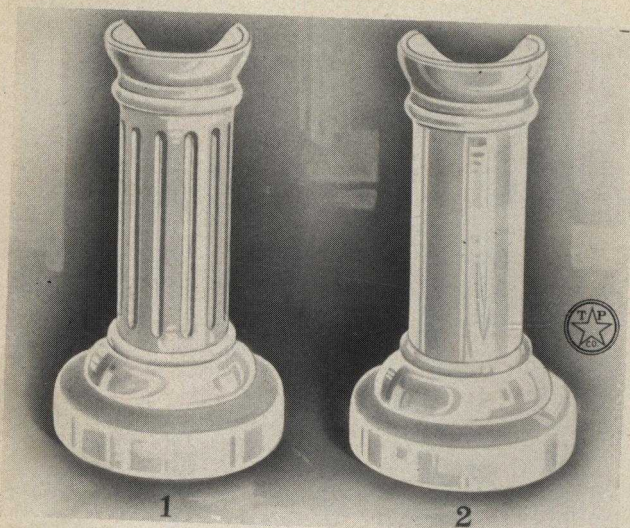

"Carnegie" Line of China Lavatories
 Details may be secured by consulting plate number as indicated

"Saxon" Line of China Lavatories

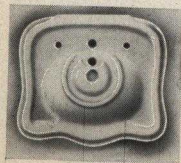

Details may be secured by consulting plate number as indicated

Vitreous China Pedestals

(Interchangeable with any other)

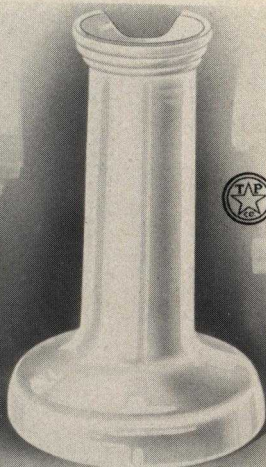

All China Pedestals for our Lavatories are interchangeable, so the selection of a particular Lavatory no longer means that the Pedestal shown with it must be used. In making any substitution state the plate number of Lavatory together with the number of Pedestal desired; otherwise the Pedestal shown will be shipped with Lavatory.

These Pedestals all take the same price, list \$11.00

3

4

Vitreous China Pedestals

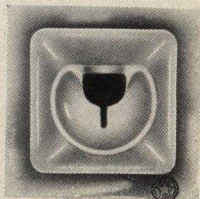

(Interchangeable with any other)

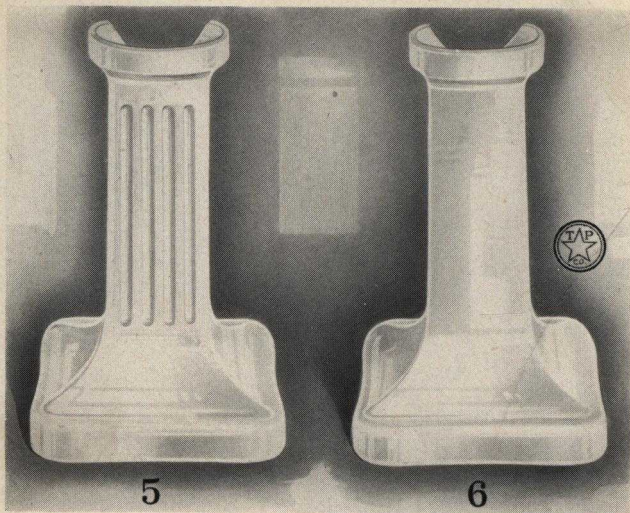

With the Pedestal is furnished, without extra charge, the Iron "T" connection for making fast the Lavatory and Pedestal. This connection is shown below; and to better illustrate how the connection is

made we here show the bottom view of a Lavatory and the top view of a Pedestal.

(See opposite page)

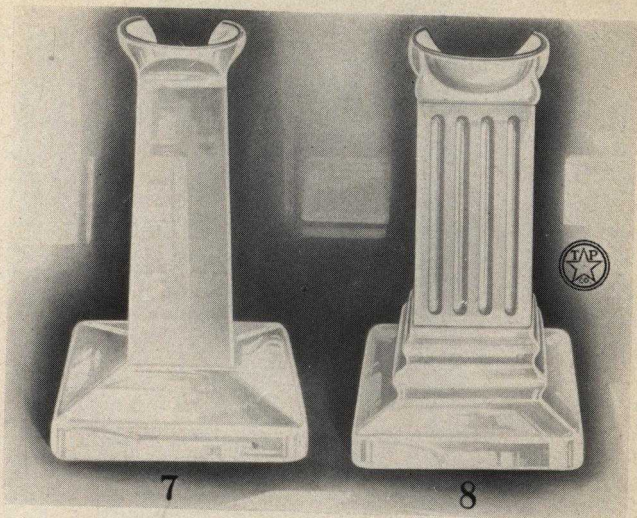

Vitreous China Pedestals

(Interchangeable with any other)

These Pedestals, together with those shown on Pages 54, 55 and 57, are all the same height from floor, making a standard height on "Impervio" Vitreous China Lavatories. The cut-out at back makes possible the reversing of the trap.

The lower cut shows the iron rod connection furnished for "Impervio" China Lavatories on Single Leg. No extra charge is made for this. It accompanies and is included in the price of a Single China Leg with pair of White Iron Angle Wall Brackets.

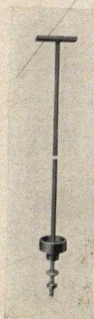

Vitreous China Pedestals

(Interchangeable with any other)

While Pedestal No. 7 is interchangeable it was made for the Square "Bellemeade" Lavatory and should not be used on any fixture not having sharp lines.

The lower cut illustrates the Iron Rod Connection furnished for "Impervio" China Lavatories set on two legs. It is longer and mechanically different from the Single Leg Rod. Also included in price of Legs together with pair of White Iron Angle Wall Brackets.

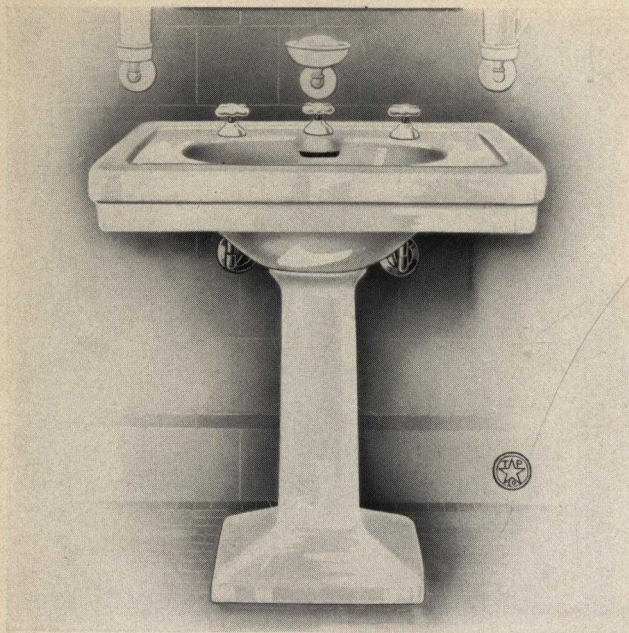

PLATE 2110-N

**"Impervio" Vitreous China "Prison" Lavatory with
Integral Spout and Outlet Cover to Wall**

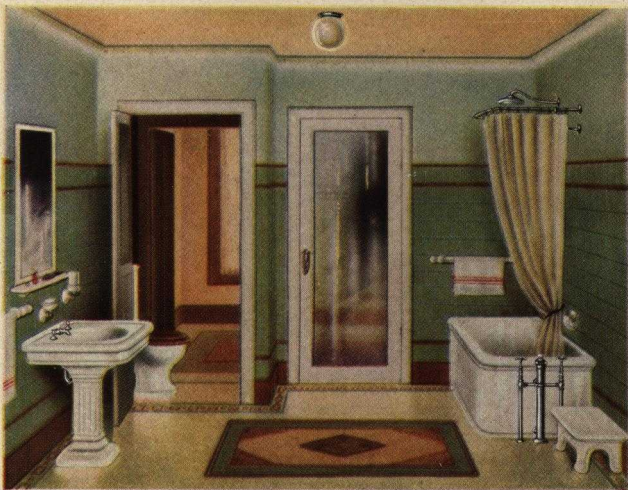

List, complete as shown \$19.85

DIMENSIONS—Width over all, 14 inches; height over all,
15 $\frac{1}{4}$ inches; height, back and sides, 5 inches; front to
back, 13 inches.

This Prison Lavatory is our latest design and is based upon many years of experience in the manufacture of all-clay plumbing fixtures for such institutions. This Lavatory in not only made from our durable "Impervio" Vitreous China, but it is so arranged that the prisoner cannot obtain implements to harm himself or others.

An Integral Spout covers the rough brass supply faucet which is operated by a push button, self-closing as shown. The bowl is filled with water by a special unremovable plug. Integral Soap Holder has hole to drain off the water. Lavatory is attached to wall by two specially constructed bolts with N.P. heads.

“Ideal” Porcelain Lavatories

“Ideal” Solid Porcelain ware is substantial, very moderate in price and, properly handled, will last as long as the best vitreous china ware. The difference between the two bodies is that the latter is non-absorbent, the former, when the glaze is removed, of coarser texture.

Users of our ware buy again. We make our goods the very best we know how, believing that it will save our customers and ourselves future annoyance.

Illustration showing the under side of a Solid Porcelain Lavatory

“Ideal” Solid Porcelain Lavatories

An argument not to be neglected in selling “Ideal” Porcelain and “Impervio” Vitreous China Lavatories is the one that they are glazed underneath the slab as well as on the top. Dust will not cling to a finely-glazed surface as it will to a rough one. What dust and dirt does collect can be easily wiped off; nor are there any sharp edges or corners to collect dirt.

The above illustration shows a Lavatory for Pedestal. Note that the outlet from the bowl is well to the back.

These Lavatories may be cut, after being fired, for any style of fitting desired. The illustration shows Lavatory cut for Standing Waste. This may be changed without harm to fixture to a Combination Supply and Waste Fixture.

fittings are ordered with the ware**

List, N.P. Brass Supply Nozzle through back, operated by Push Button set above the Lavatory; Special Lift Unremovable Pop-up Waste; Special Rough Brass Spud with two Lock Nuts for connecting Outlet through partition. F’t’g No. 3801	9.85
Weight packed pounds	105
Crating charge, net, 50 cents	

This Lavatory was first designed for the State Reformatory situated at Cheshire, Connecticut. It is made and ground to set true against a steel sheet wall. The metal fittings are so arranged that their working parts are behind the partition with a simple push button for supplying water into the bowl. None of the fittings are removable from the cell side, preventing the prisoner from using them as an instrument of destruction.

Lavatories for Factory Installation

The efficiency of the employe is governed in a large measure by his surroundings. Light, cheery quarters with plenty of fresh air have produced amazing returns in added output. The plumbing equipment is meeting with the careful consideration of many of our foremost manufacturing concerns. They realize that proper plumbing facilities lead to cleanliness, and cleanliness to better health of their workers.

The above illustration shows a part of the washroom in one of the factories in which our factory fixtures have been installed. This type of lavatory is detailed on the following pages and has been found the most satisfactory for this type of work.

"Ideal" Solid Porcelain, from which they are made, is recognized as the best material where the lavatory is to be subjected to hard usage—by workmen inclined to be careless of their own interests or those of others. Substantial in every way and the most economical to install in large batteries.

There are many factories all over the country where these fixtures are installed. We might mention as examples:

THE INTERNATIONAL HARVESTER Co., Connecticut.

THE SINGER SEWING MACHINE Co., Elizabethport, N. J.

THE PRATT AND LETCHWORTH Co., Buffalo, N. Y.

AMERICAN SUGAR REFINERY Co., Plant No. 4, Brooklyn, N. Y.

Lavatory Fittings

While the principal intention of these pages is to show the various substitutes that can be employed in connection with our lavatories, both "Ideal" Porcelain and "Impervio" Vitreous China, yet we should like to say a word regarding our fittings.

For a number of years we have been making a practice of furnishing ware ready fitted, and many of our customers are taking advantage of the opportunity offered, thereby saving themselves the trouble always involved in fitting ware. We employ plumbers, expert in this kind of work, who cut and make sure that the brass fixture fits and is complete.

We only make charge for this service when fittings are sent to us. The plumber accustomed to the occasional fitting up of fixtures and unfamiliar with the fitting will realize the saving to him of this trade help.

This Company handles only the very best Nickel-Plated Brass goods. The prices charged for same hardly cover the cost of handling and storage. We endeavor to carry in stock at all times a sufficient supply of fittings to fill any orders. In case you wish other fittings than those shown on the lavatory you desire, we show on the following pages fittings which may be substituted on any lavatory in this book. In ordering substitution of fittings state on order the Plate Number of Lavatory together with the Fitting Numbers of Fixtures desired. Be sure to give Plate Number of Lavatory, for, owing to the difference in the ware, longer shanks must be used on Porcelain than on Vitreous China.

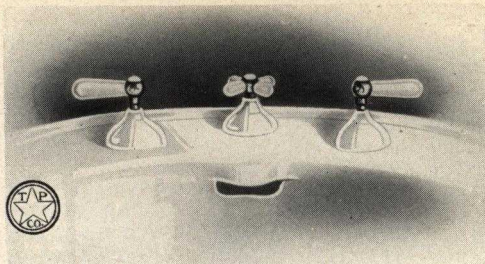

PLATE 4260-N

Integral China Supply and Mixing Chamber with Special Fittings

This integral concealed style of water supply to the bowl may be furnished on any of our Pedestal Lavatories of Vitreous China larger than the 24 x 20-inch size. Can also be furnished on our "Bellemeade" line except the smallest sizes and Corner Lavatories.

SPECIFY AS FOLLOWS:

Plate (No. of Lavatory) to be made with Plate 4260-N Integral China Supply and fitted with Combination Supply and Pop-up Waste Fitting, with Quick Compression Valves and China Tips and Escutcheons, as shown. List, add to regular list price of Lavatory desired this way . . . \$5.00
List, Special fittings as described and shown above, less Trap and Supply Pipes. Fitting No. 2210 19.25

lavatory this is to be used on in
ordering—whether Solid Porcelain
or Vitreous China.

- List, Fitting No. 8200 \$3.75

Chain Stays

The Chain Stay and Chain as shown on a number of fixtures in this book (see Plate 2205-N for example) has been found by us to be the most satisfactory type. If desired upon any Lavatory illustrated in another manner, order:

List, Chain Stay and Chain. Fitting No. 1803 \$0.60

P. O. Plugs

List, N.P. Brass P. O. Plugs, with 1¼-inch O.D. Tail Piece and Rubber Stopper, for Solid Porcelain. Fitting No. 5800 . . \$0.85
 List, same for Vitreous China Lavatories. Fitting No. 5802 . . .85
 List, if with 1½-in. Tail Piece, for Solid Porcelain. F't'g No. 5804 . 1.45
 List, same for Vitreous China Lavatories. Fitting No. 5808 . . 1.15

Basin Waste Traps

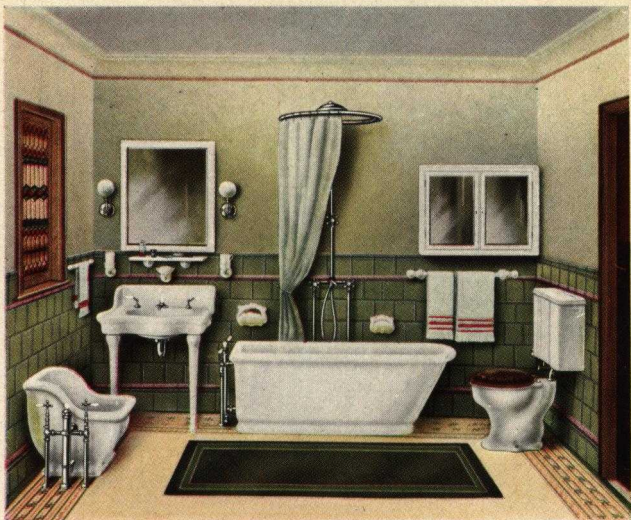

It is customary to furnish with Lavatories a Nickel-Plated Brass 1¼-inch Trap. If for any reason a larger Trap is desired, order substitution from the following Fitting Numbers. All Traps furnished less Slip Inlets but with Slip Nut for 1¼-, 1½- or 2-inch O.D. Tail Piece.

List, 1¼-inch Waste Trap to wall, not vented. Fitting No. 2501 \$1.40
 List, 1½-inch Waste Trap to wall, not vented. Fitting No. 2555 2.50
 List, 2-inch Waste Trap to wall, not vented. Fitting No. 2603 . 7.50

Supply Pipes

Unless otherwise ordered we furnish ¾-inch Supply Pipes, iron pipe size, for Lavatories. Can furnish other sizes if desired, but not from stock. If you wish Supply Pipes to floor on any Lavatory shown with them to the wall, or vice versa, order:

List, ¾-inch Supply Pipes to wall. Fitting No. 7551 . per pair \$1.60
 List, ¾-inch Supply Pipes to floor. Fitting No. 7564 . per pair 1.75
 List, Supply Pipes to wall, Wheel-Handle Stops. Fitting No.
 7552 per pair 2.50
 List, Supply Pipes to floor, Wheel-Handle Stops. Fitting No.
 7558 per pair 2.85

Closet Section

Showing Vitreous China Closet Combinations
Valve Operating Closets, High and
Low Tanks and Closets

No one can fail to find in this section the fixtures best suited for any style of building or mode of operation. A ready reference is afforded in the catalogue index for locating such fixtures.

In working qualities as well as excellence of product, this company stands at the head of sanitary ware manufacture. Every fixture shown on these pages must withstand our criticism before it reaches you.

The Noiseless Closet

Noisy water-closets are due to two things: First, water cannot be poured upon water without creating a noise. When the ordinary closet is flushed, and this applies to the syphon jet as well as the washdown, the intruding water strikes the sides and contents, thereby causing the gushing and gurgling so disagreeable to refined people. Secondly, Tanks and Tank Fittings, too small and improperly constructed, cause noise. Few ball cocks will operate satisfactorily under medium or high pressures. Under such conditions they "sing" long after the flush has been completed, to say nothing of often failing to close properly.

The "Si-wel-clo" Combination

Realizing that people were demanding for their homes a Closet Combination which would obviate these faults, we set to work. The "Si-wel-clo" Noiseless Closet is the result of our efforts and fully justifies our claims of quiet operation.

The "Si-wel-clo" is the only closet made with this one purpose in mind—to obviate the noise. At the same time it is the most sanitary type of syphon jet closet—embracing all features, such as deep water seal, sanitary rim and foot, etc.

In combination with our "Bellemeade" Tank and Special Noiseless Ball Cock, the only manner in which it should be used, the "Si-wel-clo" is superior in quiet working to any closet on the market, regardless of the water pressure.

We have added to the number of our "Si-wel-clo" family since the publication of our last Catalogue. The trade can now select from a complete line; all equal in the quality of quiet operation, but varying in the other features.

PLATE 2608-N

"Si-wel-clo" Vitreous China Noiseless Syphon Jet Raised Rear Vent Closet Combination

List, complete as shown, less Floor Flange \$50.20

The Trenton Potteries Company Plate 2608-N "Si-wel-clo" Noiseless Raised Rear Vent Syphon Jet Closet, with Vitreous China "Bellemeade" Low Tank; fitted with Upper Lever Compound Flushing Fittings, with Nickel-Plated Brass Supply Pipe to floor, and Wheel-Handle Shut-off; with Special Birch Mahogany Seat and Lid; with China Offset Connection from Tank to Closet and China Escutcheon for Round Vent; with China Bolt Caps.

NOTE—*The Si-wel-clo is only sold as a combination as shown, in order to insure perfect supply of water and the use of our noiseless tank fittings.*

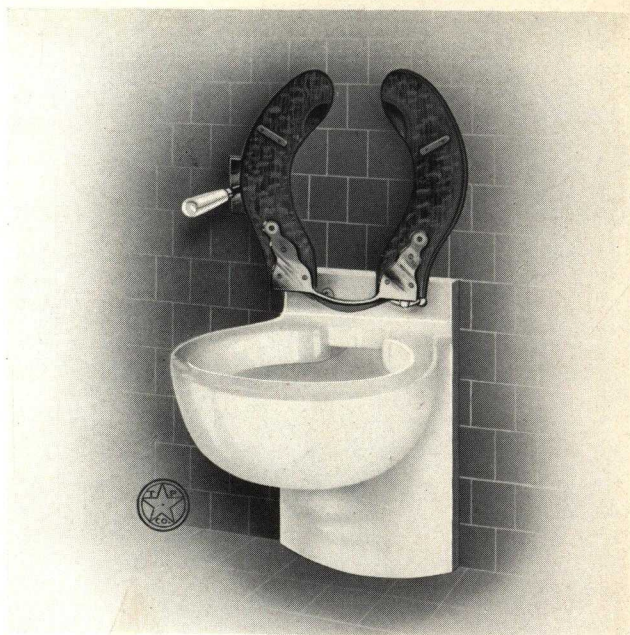

PLATE 2774-N

Broken Partition View Showing Method of
Installation and Component Parts
(See following pages for description)

The valuable features of The "Universal" Closet, from a sanitary and economic standpoint, are so diverse that we will merely enumerate the principal points concisely.

1. Closet extends 17 inches from wall to front on finished side of wall, a saving of $7\frac{1}{2}$ inches over other closets. This saving may be utilized to make pipe chamber more accessible if desired.
2. Keeps all drainage and vent pipes within a line established by finish wall of toilet room, so that no pipes show on ceiling of room below. Saves furring down or having same exposed.
3. Eliminates the ordinary expenses attending the connection of vented closet. Pipe chamber may act as vent duct.
4. Center of gravity is within the closet. No vertical joint to become loosened by pressure on bowl.

The "Universal" Wall Syphon Jet Closet

“Universal” Wall Syphon Jet Closet

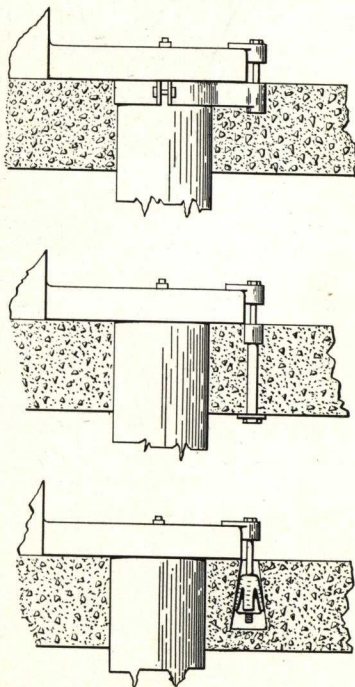

It is a full size Syphon Jet Closet, of positive action. The non-soiling back rim is a feature and the vent into pipe chamber is large and ample. The “Universal” has all the desirable features of the wall hanging closet, without the uncertainty and difficulty of making a permanent and sanitary connection with the soil pipe.

The “Donovan Safety Flange” is employed as the means of connecting it to the soil pipe—guaranteeing a perfect joint. While the center of gravity is within the closet, we provide a means of anchoring in rigid position.

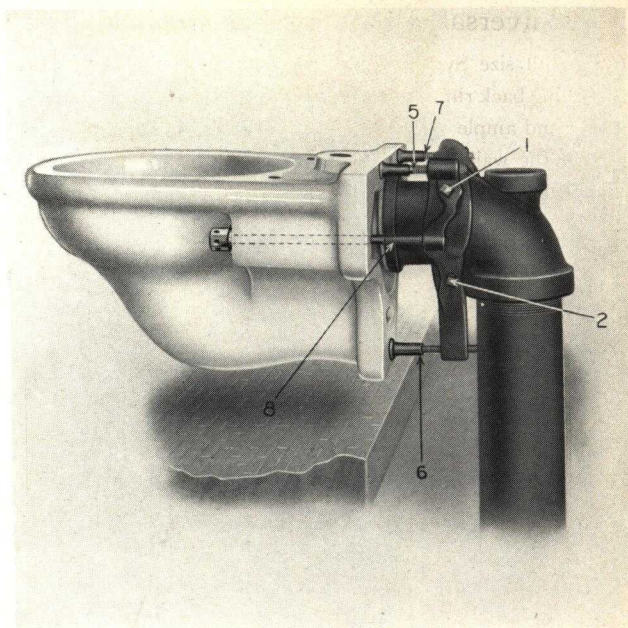

Note These Detail Drawings

Anticipating the many forms of building construction in which the “Universal” Closet will be used, we furnish with each closet means for anchoring it through the floor or ceiling, to either wood or concrete. In many cases it will be found most convenient for plumber to drill concrete floor and use ordinary expansion shells for $\frac{3}{8}$ -inch bolt furnished.

The “Universal” Wall Closet will be found the most satisfactory and ultimately economical on all classes of building where a pipe chamber is possible.

Methods for Anchoring the “Universal” Wall Closet to Floor

Working Illustration of Wall Hanging Closet

This Closet, which wastes through the wall and does not rest upon the floor, is one of the later developments in closet construction. It is fastened directly to the soil stack and does not depend upon the wall for support.

The above illustration shows the Closet fastened to the hanger and waste pipe with the marble stall removed. Nos. 1 and 2 are two of the four set screws. Nos. 5, 6 and 7 are the adjustment bolts. No. 8 is one of the two fastening bolts.

A one-piece treated asbestos gasket is used to make this waste connection.

List, Fitting No. 3700	\$3.60
----------------------------------	--------

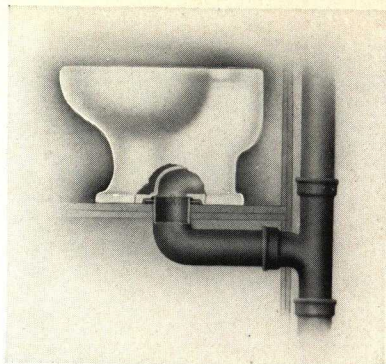

The Donovan Safety Flange for Water-Closet Connection

Insuring a perfect joint between soil pipe and closet at the most vital point—the floor line—and rendering proof of its perfection

The Donovan Safety Flange is a simplified, effective method for connecting water-closet to the soil pipe direct or through the medium of a lead bend. Saves time and money and reduces cost of operation and maintenance. The Donovan Flange used in connection with our water-closets solves the problem of providing a simple and mechanically correct principle by which earthenware is properly and directly connected to the drainage system. This is obtained at a cost within the reach of every owner, as it does not exceed that of the old method of connecting closets. In the past you have frequently questioned whether the packing on which you have depended to make a tight joint had been sufficiently compressed. This always being a matter of doubt, you had no means of knowing positively except by an air test. The Donovan Flange eliminates this weakness. In it the work is separated. One set of nuts secures the fixture rigid, the other set compresses the packing. Failure to make tight is immediately made evident by leakage of water on the floor at base of closet. The Donovan Flange is used in conjunction with a closet made with reduced sewer ring. It is, therefore, necessary to order the Donovan Flange complete with water-closet bowl. Price of closet remains the same. Any staple closet manufactured by The Trenton Potteries Company can be furnished with the Donovan Safety Flange.

List price of Flange \$2.00

Order by plate number of Closet or Closet Combination, stating on order that it is desired with Donovan Flange

Showing Closet connected direct to iron pipe.
May be connected to lead pipe. Brass ring
furnished for that purpose

The Closet Connection Question Settled

The Donovan Safety Flange may be used to connect water-closet either direct to iron pipe, eliminating lead pipe, or to a lead pipe when same is required by law or called for by architect or owner.

When connected direct to iron pipe, the saving in cost is obvious.

When connected to lead, the cost is no more than when old-style good construction is used.

The advantages over the old style, with sewer ring entering soil pipe and joint made with putty, are

FIRST: An absolutely tight joint for the prevention of sewer air passing into building.

SECOND: Immediate evidence of a defective condition by leakage of water, so that attention must be given it.

THIRD: Means of tightening packing without removing fixture.

BOOKLET: "The Dangers of Sewer Gas," dealing instructively on this subject, will be sent upon request.

Vitreous China Connections to Supply Closet from Tank

Fitting Numbers under which these may be included in your Tank
 Fittings are covered on Pages 230 and 231

Unightly green corrosion which always, sooner or later, appears on the Nickel-Plated Brass Offsets is obviated by the use of our pure White Bone China Offsets on Tank Fittings. It adds greatly to the attractiveness of the combination and, like the Tank, will not sweat. No brass or nickel work shows, being covered by China Escutcheon.

DIMENSIONS—These are covered by the illustrations above, consisting of a straight connection, 1-inch, 1½-inch and 2-inch Offsets.

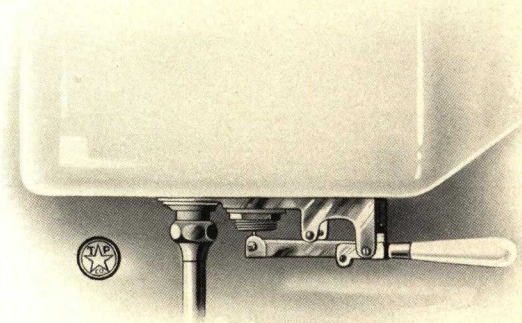

NOTE—*Differences of roughing measurement can be governed to some extent by the use of these china connections. In ordering state the offset desired by plate number, together with the plate number of tank it is to be furnished with.*

CODE UVLYS
 List, Any China Connection shown on this page, complete with Spuds already attached and one China Escutcheon . . . \$2.50

When these fixtures are shipped alone or without tanks, shipment is made by parcel post unless otherwise ordered.

No packing charge is made. Postage will be added.

Approximate weight, packed singly pounds 5

New Compound Bottom Lever Tank Fitting

So much difficulty has been encountered by manufacturers in securing a substantial Bottom Lever Fitting to operate Low-Down Tanks that we are glad to call especial attention to this Fitting. It can be placed on the Tanks as indicated on the preceding pages.

This Lever is as strong as such fittings can possibly be made. A steel rod runs into the china lever and is securely cemented. There is no danger of this handle being broken off through rough usage.

This operating device is compound in action and is made of the best Nickel-Plated Heavy Brass. Fastened to the bottom of tank in such a manner that it is impossible in any way to loosen the Ball Cock Connection. We have every confidence in it.

Can only be furnished on Low-Down China Tanks of Eight-Gallon Capacity. The smaller tanks are made for Upper Lever

Tank Fittings for Low-Down Tanks

The Trenton Potteries Company assembles its fittings from the best parts offered for its inspection and tests. As the adoption of new parts is subject to change without notice we have not stated what goes to make up the complete fittings. Our trade may rest assured that we are giving the best available.

The tables below can be used for ordering tank fittings for use in any of our China Tanks. Care should be taken to observe the note under each Tank Plate Number.

List, Eight-Gallon Low-Down Tanks, complete with fittings, either Upper or Bottom Lever, either floor or wall supply	\$20.00

PLATE 2855-N

Vitreous China "Welling" Syphon Jet Closet with Raised Rear Vent, Integral Seat and Angle Wall Flange

The "Welling" is our best and most popular style of Syphon Jet Closet. Has concealed Jet Pipes and Rolled Rim on Bowl. Entire fixture is clean cut, with no place for dirt to lodge.

Seat attached from outside—not within the vent—an improvement making it easy for the plumber to attach the seat.

Made Integral Seat as shown or with Seat Attachment if desired.

Made Wall Outlet as shown or Bottom Outlet if desired.

Made Back Supply as shown or Top Supply if desired.

In ordering or specifying this Closet, use Plate No. 2855-N, stating which of the above conditions you require. This Closet cannot be used for Low Tank, Top Supply.

Vitreous China "Welling" Raised Rear Round Vent Syphon Jet Closet

PLATE 2857-N

In the "Welling" Raised Rear Round Vent Closet the Vent is flushed with the Bowl, thoroughly cleansing any filth or dust which might have collected in the passage. A great improvement over other methods which have no way of cleansing the Vent. The "Welling" also has its Seat Posts outside the vent, saving the plumber much trouble and time in attaching the seat. Another useful feature is the vent's unwinding passage to the wall, making possible working into the air shaft from the Closet.

Rearview, showing Inlet and Vent

Features

The "Webster" Arm provides a concealed supply, adjustable within the room. No unsightly discoloration of nickel annoys the visitor. Closet may be set against marble walls or slate and is easily installed. As Tank or Valve is behind partition, it may be placed at any height desired, giving whatever force is necessary to operate the closet properly. An excellent fixture for use in schools.

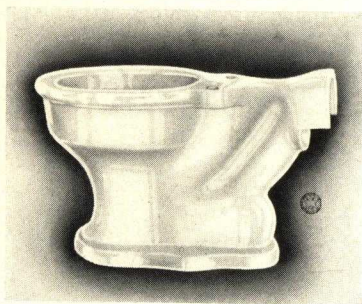

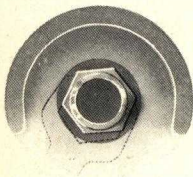

PLATE 2918-N

Vitreous China Plain Oval Syphon Jet Closet with "Webster" Arm

The feature of this Closet is a Short Integral Crockery Sleeve running back to wall, covering the Inlet Flushing Connection to Closet Bowl. The Closet may be set flush against Tile or Marble partition, operated by a Valve, with Handle through wall, or by a High Tank concealed behind partition. Plate 2704-N shows how such closets are connected.

This diagram shows how easily the Supply Connection may be made tight.

Diagrams and descriptions of the various uses of the "Webster" Arm will be furnished upon application.

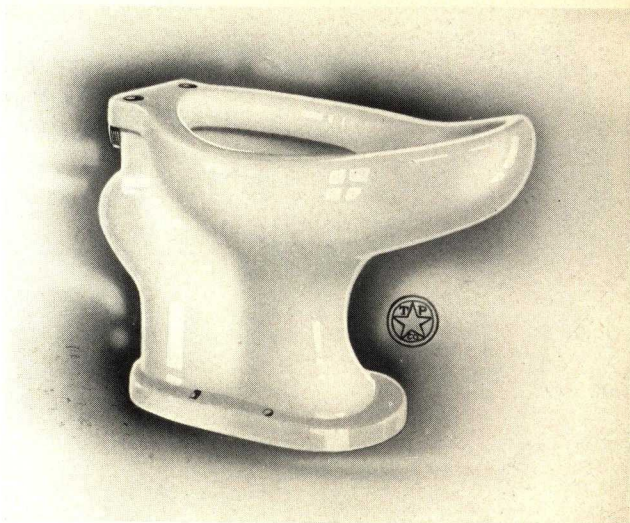

PLATE 3000-N

Vitreous China "Ease-Sit" Saddle Seat Reverse Trap Syphon Action Closet (Patented)

There is practically no fouling surface on the "Ease-Sit" Saddle-Seat Closet. The lip is naturally higher than in other closets, while the drop in the rim gives the closet the shape of a saddle. The Golden Oak Seat is made to conform to the shape of the bowl. In placing this feature on our new Reverse Trap Syphon Action Closet, we have evolved a closet closely approaching the syphon jet closet in sanitary qualities, for this Reverse Trap Closet has a larger water surface than most Reverse Trap Closets and strong syphonic action. Owing to the special construction the seat must accompany these closets.

PLATE 3228-N

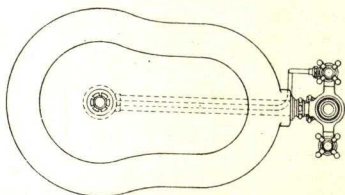

Vitreous China "Trojan" Bidet Closet

This Bidet Closet is in every way a sanitary fixture intended for use in water systems where tempered waters are seldom found. One valve regulates the flow of water to the flushing rim; the other to the "Jet" or "Douche."

NOTE—This fixture is furnished with Nickel-Plated Brass Spray Head, but is fitted with Hose Nipple so that ordinary Syringe points can be used instead of Spray if desired.

CODE VABOB

List, Bidet as shown, fitted with N.P. Brass 1¼-inch O.D. Standing Waste and Overflow, with China Index; N.P. Brass Compression Valves, with China Indexed Handles, with Unions and ¾-inch I.P.S. Supply Pipes to floor. Fitting No. 809 . . . \$34.80

Weight packed, complete with fittings . . . 100 pounds
Crating charge, net, 45 cents

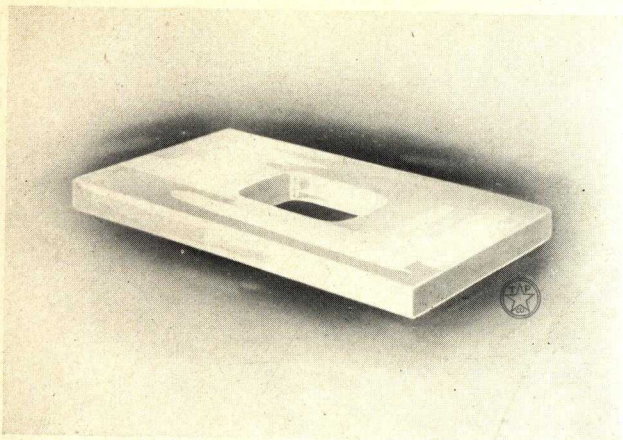

PLATE 3240-N

**"Ideal" Vitreous Floor Slab for
Closets and Slop Sinks**

DIMENSIONS			
Length over all, inches	.	.	21
Width, inches	.	.	12
Inside opening, inches	.	.	7x5
CODE	.	.	VADRI VADUF
List, Floor Slab only	.	.	\$5.00 \$5.75
Shipping weight, packed	.	.	pounds 40 55
Crating charge, net, 20 cents	.	.	

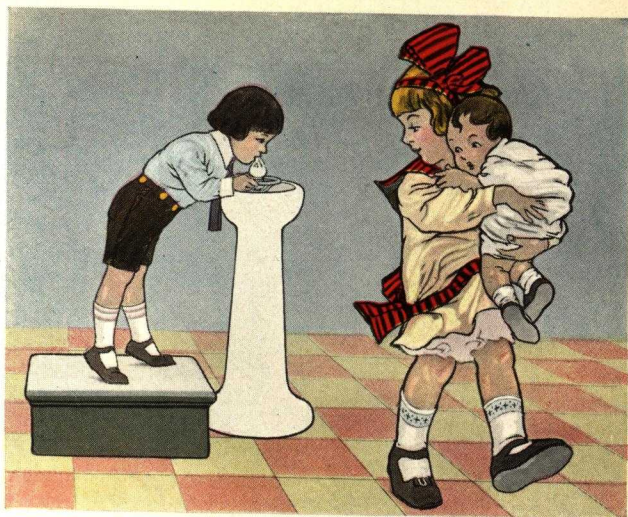

NOTE—Large size for syphon jet closets; small size for syphon action

A water-closet may be set upon even a tiled floor, yet the appearance around the base will not be viewed with pleasure. A broader, one-piece surface is highly essential to secure the most cleanly results.

Our new floor slabs are made of heavy, substantial "Ideal" Vitreous Ware, to set flush with floor surface. So cut that opening permits adjustment and allowance for corrections in roughing.

Appreciated by people expecting cleanliness.

Drinking Fountain Section

Showing Pedestal, Combination and Wall
Hanging Fountains for every purpose

Drinking fountains must needs be made for the special conditions under which they are to be used. One style will not answer every purpose.

We have provided an extensive line, not so large as to confuse the buyer, but sufficient to meet every requirement with what in our experience is the most practical and suitable design.

Every effort has been made to select the bubbling devices and fountain heads which are best in quality, harmony and most practical.

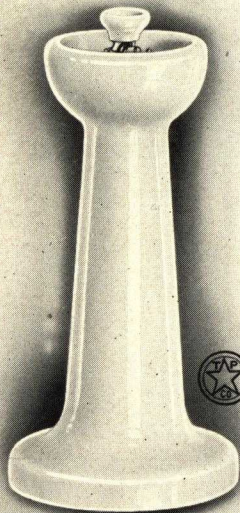

PLATE 3254-N

Vitreous China Pedestal Drinking Fountain
with Supply and Outlet through
Center of Pedestal

List, complete with fittings \$25.75 \$31.00

NOTE—This Pedestal Drinking Fountain can be also made for supply
pipe and trap to wall. If so desired order Plate 3255-N.

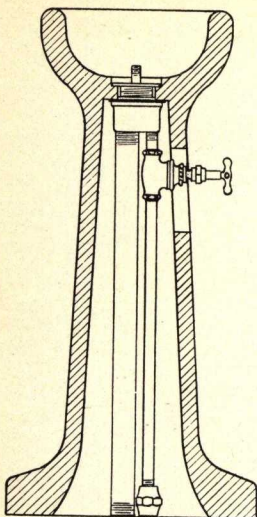

PLATE 3262-N

Sectional View of Plate 3254-N—Fountain

This illustration has several purposes. It shows the detail of the fittings, less the drinking head, as used in Plate 3254-N Fountain.

It also shows how a Self-Closing Cock may be placed on same and used with any of the constant stream fittings shown on Page 296.

It will be noted that this fitting is easily assembled. It is cut to size at the factory before shipment.

If desired, a Loose-Key Shut-off Valve may be fitted in place of the Self-Closing Cock.

Plate 3262-N should be ordered if fixture is desired as shown here. Add for Self - Closing Cock (Fitting No. 1203-H) list **\$1.05**

For other details see Plate 3254-N

Sectional View of Plate 3260-N—Fountain

This illustration shows the outline of the waste fittings carried directly through Iron Pedestal. It differs from Plate 3260-N in that the supply fittings are carried through the side of Vitreous Fountain for wall supply.

If desired in this manner order by Plate 3263-N. There is no additional charge for these side supply fittings.

This fountain is popular for use on the streets of cities and parks. In all instances it has given excellent service.

Fitting Section for Drinking Fountains

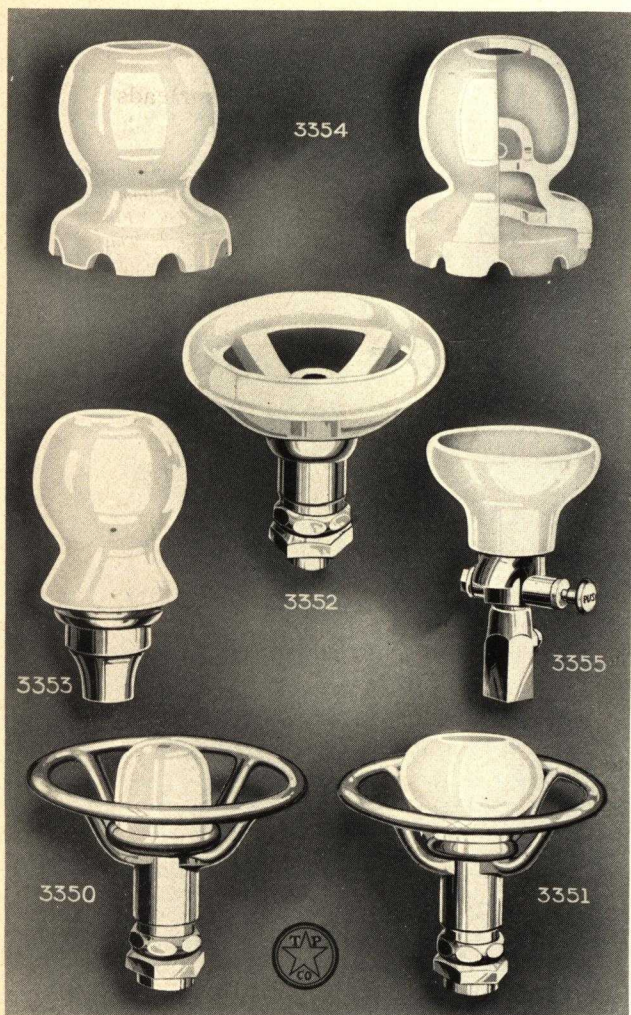

Except where it is apparent to anybody from the very style of the fountain, all fixtures in this department are interchangeable. If a fitting shown on these pages is preferable to the one shown on the fountain selected, it may be substituted, providing the number of the fitting and the number of the fixture are so stated on the order. Otherwise the fountain will be shipped with fitting as illustrated.

This is the standard supply and waste fitting adopted by us for use on such Drinking Fountains for wall hanging not made with integral crockery traps. It is furnished just as shown here.

NOTE—That the supply is male threaded for 3/8-inch pipe. All fountain head devices shown on the following pages have a female thread to fit this fixture. They are consequently interchangeable and your selection need only be limited by your desires.

List, Fitting No. 3462, with 4½-inch Strainer, for Porcelain Fountains only	\$6.50
List, Fitting No. 3456, with 3-inch Strainer, for Vitreous China Fountains only	5.55

Interchangeable Fountain Heads

(These numbers are fitting numbers and details are on opposite page)

Interchangeable Fountain Heads

(Shown on opposite page)

NOTE—Care should be taken in writing your specification on order to state, in case you wish to use another fitting from that shown on the selected fountain, that you wish "Fitting No. —," giving number of alternative selected. This is necessary because some of our plate numbers and fitting numbers are the same.

These Heads are interchangeable and threaded for our
Combination Supply and Waste Fitting

The Donovan Bubbler

The only perfect self-regulating Fountain
Head on the market

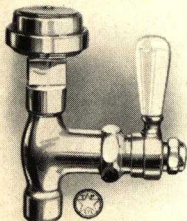

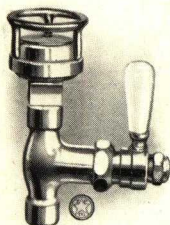

We have put this device through the most exhaustive tests as to its efficiency. The results have been more than satisfying as the Donovan Bubbler has proven its ability to automatically control the flow of water whether the pressure be 5 or 150 pounds. It passes a gentle stream rising to a 3-inch height—no more. This regulation is absolutely automatic and we can recommend this fixture to anyone who wishes to avoid the troubles attendant on other devices.

These heads are interchangeable and threaded
for our Combination Supply
and Waste Fitting

Fitting No. 3359 with China Cup.
List \$9.00

Kitchen and Slop Sinks Laundry Tubs

Showing such Fixtures of "Ideal"
Porcelain and Vitreous as are
made for the Kitchen and Laundry

No better selection of Fixtures for Kitchen or Laundry could be made than the goods shown on these pages. We have been careful to make every article meet the high standard we believe due to sanitation.

Wares made from "Ideal" Vitreous and Porcelain have proven their merit under every test. We can state with assurance that these all-clay products will long outlast any other material on the market and yet maintain with reasonable care their original beautiful appearance.

"Ideal" Porcelain Sink Legs

Since the publication of our last catalogue, there has been considerable public agitation as to the proper average height at which Kitchen Sinks should be placed.

We have, in consequence, adopted the 25 1/2-inch leg as our standard, bringing the Sink to top of rim 34 inches high. If any of the other size legs as shown here are desired, they will be furnished without extra charge.

NOTE—The Iron Straps, or in case of Porcelain Lavatories, Brackets, furnished to make fast these legs to sink are shown on the 21-inch leg. If a longer or shorter leg than the standard 25 1/2-inch is desired, so state on order, giving plate number of sink and size of legs.

List, Porcelain Legs, with Straps, "A" quality . . .	per pair	\$9.00
List, Porcelain Legs, with Straps, "B" quality . . .	per pair	6.30

Legs of Other Materials

NOTE—These legs are furnished white painted unless otherwise stated on order. Also give plate number of fixture.

We can furnish from stock where a substitute for Porcelain Legs is desired the following:

Urinal Section

Showing "Ideal" Solid Porcelain Urinal Stalls in Single Units and Batteries; Vitreous China Urinals.

The widest latitude is provided in this section for the selection of Urinals. Each piece is made with a feature, and the following pages should be carefully scrutinized before a decision is made. Without doubt "Ideal" Porcelain Urinal Stalls are the most sanitary and should be installed wherever possible. The small China Urinal is useful where the construction of the building will not permit the heavier Stall Urinal being used.

In design, sanitary qualities, materials and workmanship, both classes of Urinals are, we feel, superior to anything else on the market.

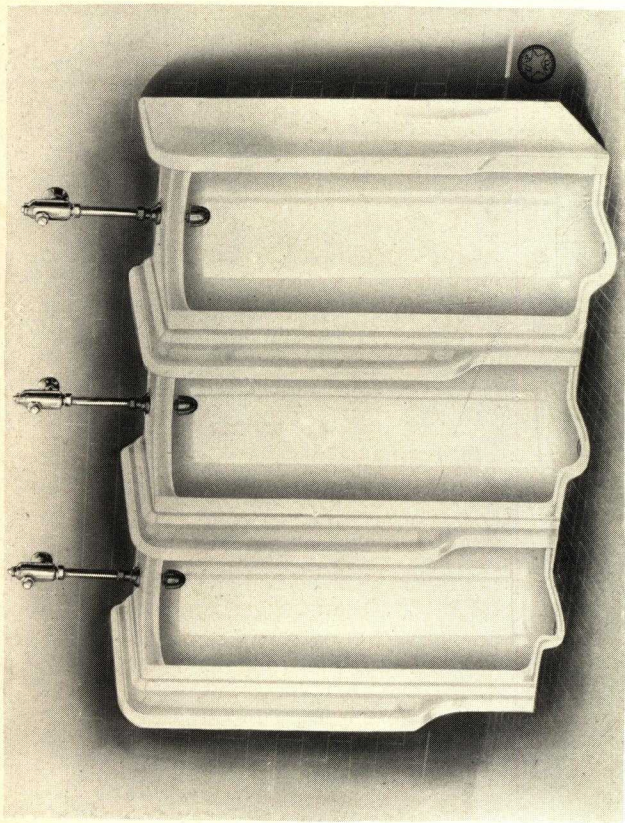

PLATE 3580-N

**"Ideal" Porcelain "Hinsdale" Patented Urinal Stalls
with Flushing Device**

For prices and other information see opposite page

Vents on "Ideal" Porcelain Urinals

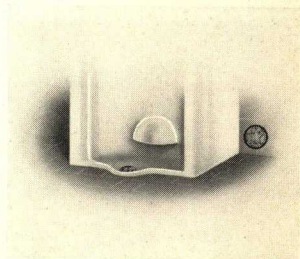

This Vent, made integrally with the Urinal Stall, may be placed on any design shown on the following pages.

The above plate shows the location of the Vent and is not made to typify the style of Urinal Stall.

In the improved manner this Vent is now made it sheds the water from the spreader without splashing it over the user.

Connection may be readily made direct to Vent Stack or into partition behind wall. Is considered a very desirable feature because it thoroughly draws off odors and keeps the room pure and clean.

List, add extra for Vent on any Urinal Stall, "A" quality, \$5.00; "B" quality, \$3.50

Under each plate is given an alternative by which that particular type with the Vent feature may be ordered.

Vitreous China "Troy" Syphon Jet Urinal with Hood and Vent

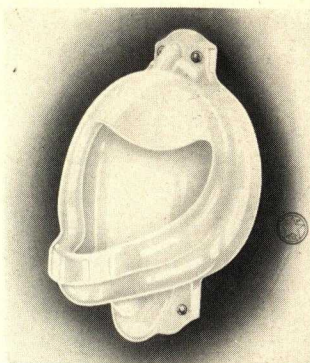

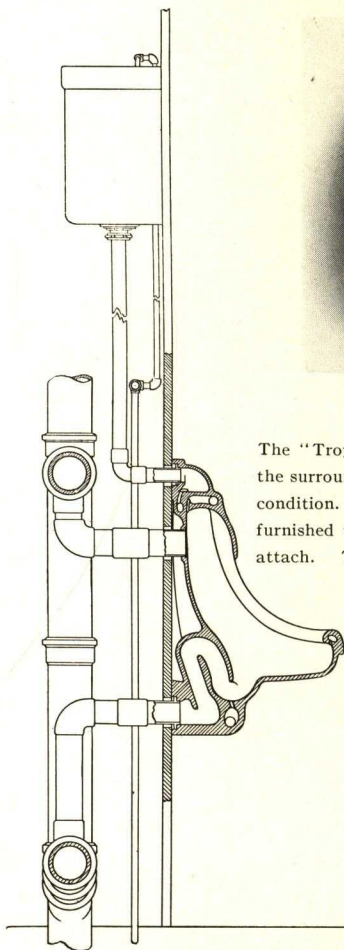

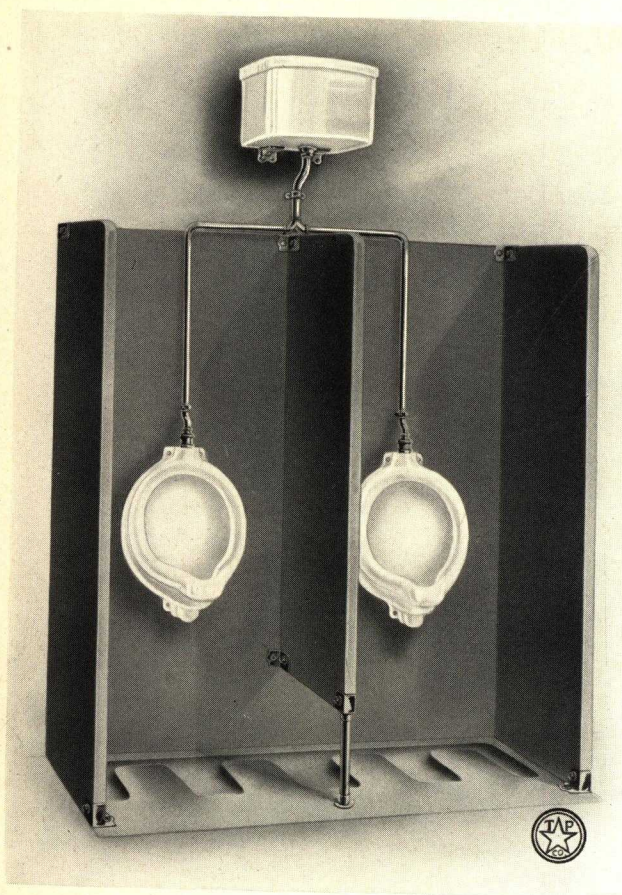

PLATE 3660-N

The "Troy" Syphon Jet Urinal, as shown on the surrounding pages, is made to meet every condition. Where made with wall outlet it is furnished with a fitting which is very easy to attach. The diagram shows the ordinary method of installing, with Tank behind wall. For information on such Tanks refer to Plate 2847-N. Supply is for 1¼-inch Iron Pipe and Waste for 2-inch Iron Pipe.

Crating charge, net, 35 cents	

Methods of
Making China Urinal Wall
Connection

These two connections are used exclusively on our "Troy" and "Morse" China Urinals. They are identical in construction, except that the outlet connection is made for 2-inch Iron Pipe, while the inlet connection is for 1¼-inch on the "Troy" and ¾-inch on the "Morse."

It is simple, effective and the connection can be made with very little labor.

1¼-inch Rough Brass Inlet Connection. Fitting No. 7912	\$0.75
2-inch Rough Brass Outlet Connection. Fitting No. 7913	1.10
¾-inch Rough Brass Inlet Connection for "Morse." Fitting No. 791170

Vitreous China "New York" Urinal, Drain Screw

This Urinal is made with Top Supply. Has Wall Outlet through Rough Brass Fitting. The special feature is the Drain Screw at the bottom of Trap, the removal of which drains off water from the Urinal Trap. An excellent fixture for amusement resorts where building is unoccupied part of the year. This Urinal can be made to Syphon with a Trap behind wall, and a Tank, 6 feet drop.

"Ideal" Solid Porcelain

Made in "Continental" or "Buff"

The following pages will give a list of the Catalogued Fixtures which we can furnish made with this finish

Explanation

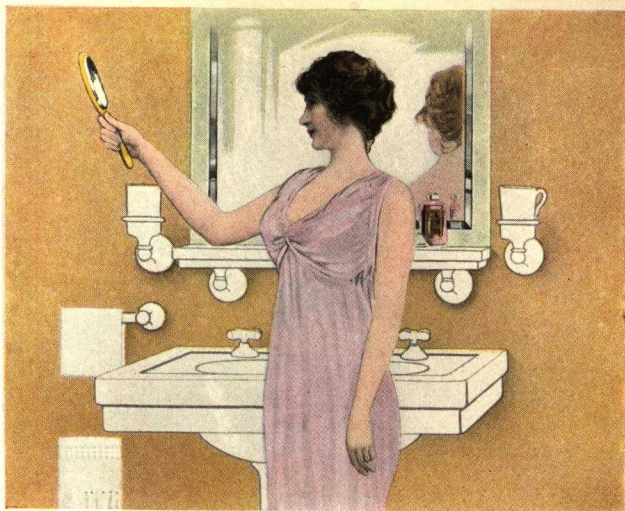

"Continental" or "Buff" Ware consists of applying the Glaze on Solid Porcelain Ware directly on the body and not after an application of ground Vitreous China slip, which is what gives this material its white color. "Continental" Ware is just as serviceable as the regular white Porcelain and the saving effected in cost is due to the above-mentioned process being eliminated. Of course it is not as attractive a color as the pure white, nor will it show dirt as readily.

**"Ideal" Porcelain Tire Tester Set on
Porcelain Pedestal**

This fixture is for installation in both public and private garages. It affords a proper receptacle for the testing for leaks of Inner Tubes by water. Is of sufficient size to hold the largest tube partially submerged.

Being elevated upon pedestal, the task of tire testing is no longer a back-breaking one over an unsightly wooden tub on the floor.

Plate 3890-N has a 2½-inch outlet in middle of bottom furnished with Rubber Plug and N.P. Brass Coupling. May be trapped and furnished with Bell Supply Fixtures at option of owner in which case same fittings as shown on Plate 2035-N would apply.

PLATE 3890-N

List, per dozen60
List, per hundred	5.00

How Porcelain Should Be Set

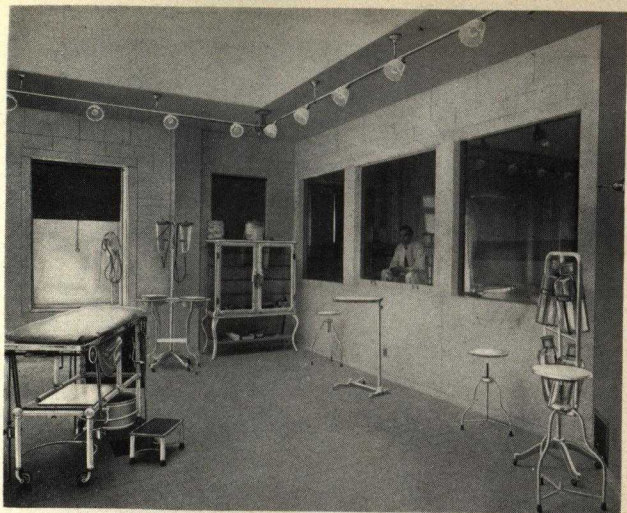

Great care should be exercised in setting plumbing fixtures of any material, particularly porcelain ware. It should always be borne in mind that most building materials, particularly cement and concrete, are subject to greater degrees of contraction and expansion than hard fired clay fixtures. When porcelain ware is set on such substances, binding a broad surface solid, and extremes in temperature occur, there can be but one result, *i. e.*, the porcelain must give.

The Trenton Potteries Company goes to considerable trouble to paste a label on each piece of "Ideal" Porcelain ware, such as Corner and Recess Baths, Urinal Stalls, etc., instructing how such pieces should be set. We cannot be held responsible for these instructions not being carried out.

As the label reads:

Never Grout in Solid

When set in mortar, plaster, cement or concrete, at least a half inch should be allowed for rocking in with dry sand. This will probably allow for the natural contraction and expansion of walls, partitions, concrete, etc.

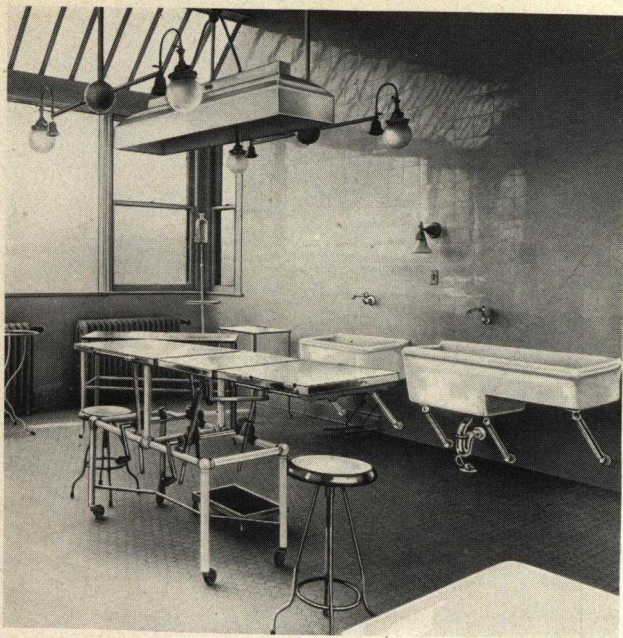

Hospital Section

Showing such Plumbing Fixtures
and their accessories as are made for
Clinics, Hospitals and Sanitariums.

The Trenton Potteries Company has for many years been the leading manufacturer of all-clay plumbing fixtures for surgical and hospital work. In order that these wares might be more accessible to the plumber occasionally installing, and the architect specifying it, we have decided to place such goods in this section of our catalogue.

"Ideal" Solid Porcelain and "Impervio" Vitreous China have become a recognized standard for the plumbing fixtures in hospitals. Many installations already made can be pointed to with pride. None but all-clay materials will supply the sanitary needs of surgical work. By the intensity of the firing given and the nature of clay and glaze, our wares stand out superior.

A MODERN operating room should not only be equipped with all-clay plumbing, but with such operating fixtures as will permit the free use of the hands by the operator. They should not be liable to get out of order in an emergency.

Our experience in supplying Hospital Plumbing Equipment has enabled us to pick and choose the very best of Brass Trimmings and Operating Devices from the offerings of many brass manufacturers for the equipment of our ware.

In consequence, the specification of The Trenton Pot-teries Company Plate numbers means obtaining devices which practical experience has proven the best and most improved.

PLATE 4505-N

**"Impervio" Vitreous China "Clinic" Square
Pattern Lavatory**

(Set upon Two Vitreous China Legs)

List, complete with fittings \$114.45

DIMENSIONS—Length over all, 36 inches; front to back, 24 inches; apron, 4 inches; bowl, 13 x 17 x 6 inches; trays, 14½ x 6½ x 1½ inches.

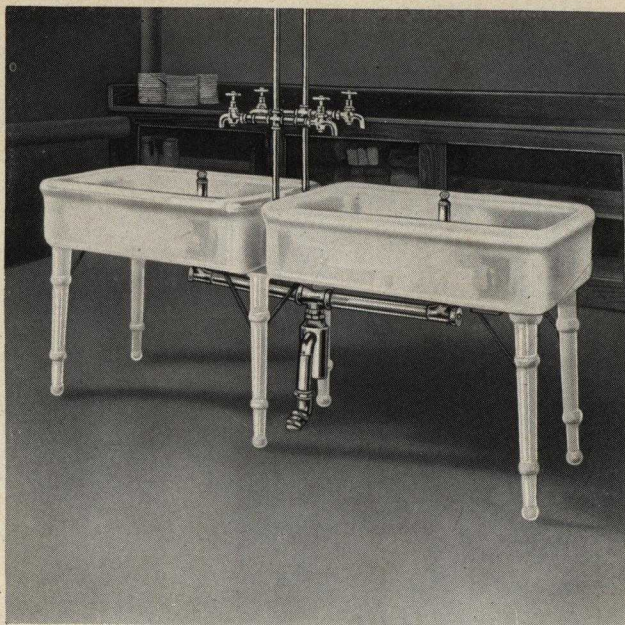

PLATE 4568-N

"Ideal" Vitreous Sinks for Hospital Kitchens

(Set upon White Painted Iron Legs)

For prices see Pages 301 to 304

Hospitals must be essentially clean, not only in the operating rooms, the wards and clinics, but especially where the food is prepared.

"Ideal" Vitreous is the finest material for use in Hospital Kitchens, because it can most readily be cleaned and is most resistant to dirt and grease.

Prices on various designs of Kitchen Fixtures for the Hospital may be secured by consulting our regular N Catalogue section devoted to Kitchen Sinks and Laundry Tubs.

Our draughting department is ready to make detailed suggestions if you can advise what your special requirements are.

Sectional View of Plate 4573-N

This view illustrates the interior construction of our special Clinic Flushing Rim Slop Sink and the method of cleansing a bed pan. It is accomplished without touching more than the surface of the ware.

On Plate 4573-N we have centered the Trap Standard. It is a vast improvement over anything on the market in which the Trap Standard is off center. The many complaints we received of these fixtures being broken because physicians *would* sit or lean heavily upon them, caused us to make this change.

The jet for washing bed pans is operated by the Pedal Treads. The flushing rim is operated by a tank or valve supplied over head or behind partition.

PLATE 4577-N

INSTITUTIONS employing a large number of people are making provision for accidents and minor ills by maintaining a privately-equipped hospital within the building. The above illustration shows the hospital room of the Curtis Publishing Company, employing over 1800 men and girls.

It is often advisable in such cases to install the Foot Bath as shown. This and many other fixtures adapted for hospital work but not surgical in nature may be observed by inspecting the following Plates in our Catalogue N.
